Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the YEA medium for 24 h at 28°C. The cell concentration of the strains was adjusted to 10<sup>8</sup> cells/ml. The cell suspension was mixed with the plant tissue and the transformation efficiency was determined. The results were expressed as the mean ± SD of three independent experiments. The asterisks indicate the significant difference between the strains at the same concentration of the cell suspension.

Note. The differences in the figures for the year 1921 & 1922 are owing to the fact that the first year's figures were not correct. In November 1922 I took a Census of all the Sanitary Conveniences in the District and the figures for that year and since, as given above, are correct.

In February 1925 I presented a report to the Sanitary Committee on the unsatisfactory method of working in the Scavenging Department. The Council accepted this report, a charge-hand was appointed and the control of the men in the Department placed under my control. Since that time great improvements have been effected in the Scavenging on the ashpits, the work has been re-organised and has proceeded and is proceeding more economically and more satisfactory under my direct supervision than hitherto. Every ashpit in the District is now being emptied every 28/30 days against every 50/55 days previously.

In conclusion, Gentlemen, I beg to acknowledge the courtesy and consideration extended to me by the Chairman and Members of the Sanitary Committee.

I also beg to tender my sincere thanks to Dr Hatherley for his very great help and valued advice given to me in the discharge of my duties.

I beg to remain, Mr Chairman & Gentlemen

Your obedient servant,

Ernest Adams.,  
C.R.S.I., H.S.I.A.,

Sanitary Inspector.
